

LAB - Flowchart & Java programming.

i) check Positive No.

ii) check Negative No.

import java.util. Scanner;

public class question 1

```

{
    public static void main(
        String [] args)
  
```

```

{
  
```

```

    int num = 0;
  
```

```

    IF ( num > 0)
  
```

```

    { System.out.println("The
      Number is positive");
    }
  
```

```

    else
  
```

```

    { System.out.println("The
      Number is Negative");
    }
  
```

```

}
  
```

```

}
  
```

import java.util. Scanner;

Start

Input (num)

public class question 2

```

{
    public static void main(
        String [] args)
  
```

```

{
  
```

```

    int num = 0;
  
```

```

    IF ( num > 0)
  
```

```

    { System.out.println("The
      Number is positive");
    }
  
```

```

    else
  
```

```

    { System.out.println("The
      number is Negative");
    }
  
```

```

}
}
}
  
```

3) Check Odd or Even Number: →

```

import java.util.*;
public class program3
{
    public static void main (
        String [] args)
    {
        int num = 4;
        if (num % 2 == 0)
        {
            print System.out.println
                "The Number is Even";
        }
        else
        {
            System.out.println("The
                number is odd");
        }
    }
}
  
```

4) Display Good Morning Message Based on Time.

```

public class program4
{
    public static void main (String []
        args)
    {
        if (Time between 5 AM To
            12 PM)
        {
            println("Good Morning");
        }
        else
        {
        }
    }
}
  
```

5) Print Area of Square-

```
public class Square
{
    public static void main (String[] args)
    {
        int num = 5;
        int square = num * num;
        System.out.println("The
        Square of "+ num + " is : " +
        square);
    }
}
```

Output = 25

6) Print Area of Rectangle

```
public class Area
{
    public static void main (String[] args)
    {
        int length = 10;
        int width = 12;
        int Area = length * width;
        System.out.println("The Area
        of Rectangle is: " + Area);
    }
}
```

Output = 120

Find the largest of Three Numbers :

Start

↓
Input Three Numbers.

(num 1, Num 2, Num 3)

↓
if (Num 1 > num 2)

~~if~~ ~~print~~

&& (Num 1 > num 3)

else

(num 2 > num 3)

↓
Print largest Num

↓
Output.

Public class largest

{
public static void main (String [] args)

{
int num1 = 10;

int num2 = 20;

int num3 = 30;

if (Num1 > num 2) && (num 1 > num 3)

{
System.out.print("The Num 1 is largest");

}

if (num 1 < num 2) && (num 2 > num 3)

{
System.out.print("The num 2 is largest");

}

if (num 1 < num 2) && (num 2 < num 3)

{
System.out.print("The Num 3 is largest");

}
